

Inspection to submittable report in 72 hours.

Whether you engineer, adjust or build, Sammlo turns your field photos and notes into a drafted, defensible report in your firm's voice, in minutes. Your team reviews and signs instead of starting from a blank page.

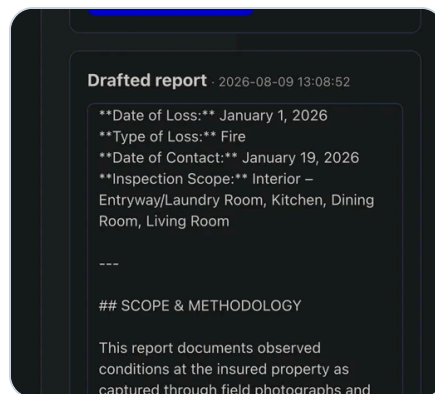

Field to finished report, in one flow

The same system your field team uses on site produces the report your reviewer signs. No re-keying, no separate tools.

1 Capture

Photos filed by area with date and location. Your field rep dictates an observation under each one, on site.

2 Generate

One click turns those photos and notes into a drafted report: Engineering, Adjusting or Contractor.

3 Sign & file

Rendered as a finished report with your company logo. Your reviewer edits and signs; report, photos and estimate file into the claim.

Their words, expanded — never invented.

The draft is built only from the photos and observations your team recorded in the field. It organizes and expands their notes into report prose; it does not add damage, causes or conclusions of its own. Preview exactly what's sent before you generate.

Engineers

Professional time is the cost. Collapse report-writing hours into a review pass, and protect defensibility: the narrative comes from your own documented observations.

Adjusters

Turnaround wins assignments. Field reps work the estimate while the photo and narrative reports generate, and the package goes out while the loss is still fresh.

Contractors

Documentation gets the job approved. Turn walkthrough photos into a clean, photo-backed damage report with your company logo, ready to send to a client with your estimate.

Forensic Engineering Report

Claim #: 134567 Insured: [REDACTED] Date: August 12, 2026
Type of Loss: Wind Carrier: Sample Insurance Co
Date of Loss: 2026-01-01

FORENSIC ENGINEERING INSPECTION REPORT

Claim Number: 134567 Insured: [REDACTED] Type of Loss: Wind Reported Date of Loss: January 1, 2026 Inspection Date: August 9, 2026 Inspection Time: 14:15 (Local) Inspection Location: [REDACTED] Report Prepared By: [Inspector Name / License Number]
Report Date: [Report Preparation Date]

I. INTRODUCTION AND PURPOSE

This report documents the findings of a forensic engineering interior inspection of the subject residential structure, conducted on August 9, 2026, in connection with a reported wind-loss event of January 1, 2026. The purpose of the inspection was to observe and document the interior condition of the structure, identify any visible evidence of damage or distress, and evaluate, to the extent supported by the documented observations, whether such conditions are consistent with the reported mechanism of loss.

II. METHODOLOGY

The inspection was conducted by direct visual observation of accessible interior spaces. The inspector progressed through the residence in sequence, beginning at the primary entry on the right elevation (as viewed from the road) and proceeding through the laundry/entry area, kitchen, dining room, office area, and living room. Photographic documentation was obtained in each area. Observations recorded by the inspector in the field, together with the photographic record, form the exclusive evidentiary basis for this report. No destructive investigation, moisture probing, or material sampling was performed during this

A real Sammlo forensic engineering report, drafted from field notes. Adjusting and contractor report types are included too. Personal details redacted.

WHY FIRMS TRUST IT

- **Built from your team's own words.** No inferred damage, causation or conclusions.
- **You see exactly what's sent.** Preview photos and notes before generating.
- **Your data stays yours.** Each firm runs on its own isolated database and its own AI key.
- **Your professional signs.** Every report is a draft for the person who stands behind it.

WHAT'S INCLUDED

- Field photo capture by inspection area, with re-inspection support
- AI-drafted reports in three types, with your company logo
- Claim intake from documents, carrier and insured records, scheduling
- Estimate import, document filing and invoicing
